REPLY TO THE ATTENTION OF:

WC-15J

Mr. Thomas Moe, Environmental Engineer
Minnesota Ore Operations
United States Steel Corporation - Minntac
P.O. Box 417
Mountain Iron, Minnesota 55768

Re: United States Steel Corporation – Minntac Tailings Basin Facility
NPDES Compliance Sampling Inspection Report

Dear Mr. Moe:

On September 12-13, 2017, the U.S. Environmental Protection Agency conducted an NPDES compliance sampling inspection at the U.S. Steel Corporation - Minntac Tailings Basin Facility, in Mountain Iron, Minnesota. The enclosed NPDES Compliance Sampling Inspection Report summarizes the inspection activities and includes the results of samples collected by EPA.

If you have questions or concerns regarding this report, or believe any part of the report is not accurate, please contact Dean Maraldo of my staff at (312) 353-2098 or maraldo.dean@epa.gov.

Sincerely,

A handwritten signature in blue ink, reading "Ryan Bahr", is positioned above the printed name.

Ryan Bahr
Chief, Water Enforcement and Compliance
Assurance Branch, Section 2

I. INTRODUCTION

On September 12-13, 2017, I conducted an announced compliance sampling inspection at the U.S. Steel – Minntac Tailings Basin Area facility (Facility) located near Mountain Iron, Minnesota. I was joined by inspector Jonathan Moody from EPA's Region 5 Office of Enforcement and Compliance Assurance. The purpose of the inspection was to collect samples and assess the Facility's compliance with the Clean Water Act (CWA) and the National Pollutant Discharge Elimination System (NPDES) permit for the Facility. The inspection consisted of the following major activities:

- Inspection opening conference;
- Brief interview and discussions with Facility representatives regarding past reported violations, and the status of the Sand River surface seepage collection and return system (SC&R), and the proposed Dark River surface seepage collection and return system;
- Compliance sampling; and
- Closing conference.

This report summarizes the results of the inspection. The following personnel were involved in the CWA inspection of the Facility:

U.S. Steel: Chrissy Bartovich, Environmental Director
 Tom Moe, Environmental Director
 Eric Williams, Water Manager

EPA: Dean Maraldo, EPA Region 5 Inspector
 Jonathan Moody, EPA Region 5 Inspector

II. BACKGROUND

The Minntac Tailings Basin is a part of a U.S. Steel (USS) mining operation in St. Louis County, Minnesota. See Figure 1 for an aerial image of the Facility. Figures are included in Appendix A. The Facility was constructed in the 1960's and was issued NPDES/State Disposal System Permit #MN0057207 (permit), authorizing discharges from the Tailings Basin to the Sand and Dark rivers in 1987. The permit expired in 1992. The Tailings Basin sits on a divide between two major watersheds. When the Tailings Basin was constructed, the headwaters of both watersheds were filled in with mine tailings. The principal activity at this Facility is taconite processing. According to USS's 2014 NPDES Permit Application, USS generates an average of 14 million long tons of taconite pellets per year at its Mountain Iron mining operation, and discharges a maximum of 100 gallons per minute (gpm) of wastewater through the Tailings Basin Seep Water Outfall SD001 to the Dark River. The process operations performed at USS are classified by the Standard Industrial Classification (SIC) codes 1011, Metal Mining (Ore Mining and Dressing) – Iron Ores.

III. COMPLIANCE SAMPLING INSPECTION ACTIVITY SUMMARY

III. A. Opening Conference

I arrived at the Facility security building at 7:45 am on September 12, 2017. I was joined by EPA inspector Jonathan Moody. After checking in with the security office we drove to the nearby Administration Building to meet with USS officials and begin the inspection. We arrived at 8:08 am, and were met by USS representatives Chrissy Bartovich, Tom Moe, and Eric Williams. The inspection opening conference began with introductions, and I presented my EPA Inspector Credentials to the USS

representatives at 8:16 am. Ms. Bartovich mentioned that she copied all of the available documents I requested prior to the inspection to a flash drive. I confirmed that none of the documents were claimed as confidential business information (CBI).

I went over the inspection objectives, including a review of any recent reported violations, review of SC&R operations and efforts to address west side seeps, observing and sampling wastewater seep areas along the Tailings Basin perimeter dike, observing and sampling Timber Creek, and review of information requested. I asked for the name and title of the USS official responsible for NPDES compliance and discharge monitoring report (DMR) certification. Mr. Moe stated that he signs DMRs for the Facility.

III. B. Interview

Review of Recent Violations:

I asked the group to describe any permit compliance issues experienced over the last few years. Mr. Moe mentioned a “3-hour discharge” from outfall SD002 in 2015. He said the discharge, caused by a seep collection issue associated with the SC&R system, was reported in the Facility’s June 2015 DMR, and addressed. Mr. Moe also mentioned having trouble meeting limits on a scrubber, and said that they are working with the state to resolve the issue.

Seep Collection Systems:

Mr. Moe described the SC&R system, which includes a series of seep catch basins. The basins capture flow from 13 wastewater seepage locations. The captured seep flow is piped to pump stations and returned to the Tailings Basin. Sheet pile cut-off walls were installed downgradient of each catch basin, down to a depth of approximately 15 feet, to minimize impacts to surface waters. Mr. Moe confirmed that the SC&R system went on line at the end of 2010. I asked how the SC&R system is performing. Mr. Moe stated that they had some clogging issues with catch basin inlets, but the use of tanks and cleanouts has helped to improved performance. Ms. Bartovich added that they’ve had some “growing pains” related to maintenance. Mr. Moe mentioned having some issues with pump stations and access to pumps.

I asked if they’ve had any issues with overtopping or bypasses with the SC&R system. Mr. Moe stated that they have not. Ms. Bartovich added that beehive inlets at the catch basins have been effective.

Mr. Moe provided an update on the planned Dark River surface seepage collection and return system (SCRS). He described the SCRS as being similar to the east side SC&R system design, including four seep catch basins with sheet pile cut-off walls, and a pump system to return seep flow to the Tailings basin. Mr. Moe provided an update on status of SCRS design and construction. He said the preliminary design was complete and they are waiting for Clean Water Act Section 404 permit approvals. I asked for a copy of the 404 permit application.

Sampling Overview:

I went over the plan for sampling of seeps along the Tailings Basin dike perimeter, with a focus on the seepage locations identified in USS’s *Minntac Western Seepage Collection System – Phase 2 Report* (Hatch, 2014). I also mentioned an interest in observing and collecting samples from wastewater seeps on the east side of the Tailings Basin dike perimeter and Timber Creek. Mr. Moe mentioned that some of the flow discharging at Seep C (see Figure 2 for USS’s western seepage locations), comes from the Dark River Pond (see Figure 3). Mr. Moe said a constructed subsurface French drain conveys flow from the Dark River Pond to a ditch along the southwest perimeter of the Tailings Basin Dike, eventually discharging at Seep C. He added that the water in the Dark River Pond is currently used for drill water.

I concluded the interview at 9:00 am on September 12, 2017.

III. C. Sampling Description

At 9:05 am, on September 12, 2017, EPA Inspector Jonathan Moody and I began preparing for sample collection from wastewater seep areas along the Tailings Basin dike and Timber Creek. The objective of the EPA sampling event was to characterize wastewater discharges from the Tailings Basin to the Sand River, Dark River, and Timber Creek watersheds. Photographs referenced in this report are included in the Photo Log (Appendix B). Samples were collected for laboratory analytical parameters, including total metals, total alkalinity, hardness, bromide, chloride, fluoride, total mercury, total suspended solids (TSS), total dissolved solids (TDS), and sulfate. Details regarding the sampling plan and quality assurance can be found in the Quality Assurance Project Plan/Sampling Plan (Appendix C). In addition to collecting samples for laboratory analysis, we used a YSI 556 MPS water quality meter to monitor pH, Specific Conductance, Temperature, and Dissolved Oxygen at each sample location, and additional areas where laboratory samples were not collected. Mr. Moody calibrated the YSI meter on September 12, 2017, at 9:13 am. All buffers and calibration standards were within expiration dates. See buffers and standards in photograph USSM0252.jpg.

Figure 1 provides an overview of sampling stations. Figures 4-11 include aerial images of sampling locations based on Township 59N, Range 18W, section numbers. Table 1 provides a description of the physical sampling locations. Tables 2-4 summarize the results of sample analysis for all fifteen sample stations locations, including locations where only field parameters were measured. At 9:31 am, on September 12, 2017, I began the sampling inspection and was joined by Mr. Moody, Mr. Moe, and Mr. Williams. Mr. Moe and Mr. Williams collected co-located samples and field measurements.

On September 12, 2017, we concluded sampling activities at 4:25 pm. We secured the samples in iced coolers in our locked vehicle overnight.

On September 13, 2017, we returned to the facility at 7:50 am. Mr. Moody re-calibrated the YSI meter at 8:08 am. Prior to sampling we met with Ms. Bartovich, Mr. Moe and Mr. William to discuss the plan for the day. I asked for additional details regarding the design of the seep collection systems. Ms. Bartovich added that the seep collection systems were “designed to collect upper seep flow, not designed to capture deeper flow.” We resumed sampling activities at 9:16 am, again joined by Mr. Moe and Mr. Williams.

Table 1. Description of the physical sampling locations.

Sample Station No.	Sample Numbers - Type	Collection Date/Time	Sample Description and Location	Sampling Method and Photos
S01	S01-Water	9/12/2017 9:57 am	Township 59N, Range 18W, Sections 19 and 24; Location of Seep “A” (Hatch, 2014). Flowing seep water under access road. See Figure 5. 47.57985 N; 92.68961 W	Grab sample. Glass grab jar used to collect samples. USSM0253.jpg USSM0255.jpg
S02	S02-Water	9/12/2017 10:23 am	Township 59N, Range 18W, Section 30; Location of Seep “C” (Hatch, 2014). Referred to as “Dark River Pond Seep” by Mr. Moe. See Figures 3 and 4. 47.56834 N; 92.68606 W	Grab sample, collected directly into sample bottles. USSM0256.jpg USSM0257.jpg

Sample Station No.	Sample Numbers - Type	Collection Date/Time	Sample Description and Location	Sampling Method and Photos
S03	S03-Water	9/12/2017 10:50 am	Township 59N, Range 18W, Section 18; Location of Seep "3" (Hatch, 2014). Sampled trickle flow from base of berm. See Figure 6. 47.59813 N; 92.68136 W	Grab sample, collected directly into sample bottles. USSM0258.jpg USSM0259.jpg
S04 D05	S04-Water D05-S04 duplicate	9/12/2017 11:08 am	Township 59N, Range 18W, Section 18; Outfall SD001 and location of Seep "4" (Hatch, 2014). Sampled directly from outfall discharge. See Figure 6. 47.59878 N; 92.67989 W	Grab sample, collected directly into sample bottles. USSM0260.jpg USSM0261.jpg
S06	S06-Water	9/12/2017 11:30 am	Township 59N, Range 18W, Section 7; Location of Seep "7" (Hatch, 2014). Sampled seep pool at base of berm. See Figure 7. 47.61200 N; 92.68116 W	Grab sample, collected directly into sample bottles. USSM0262.jpg USSM0263.jpg
S07	S07-Water	9/12/2017 11:51 am	Township 59N, Range 18W, Section 6; Location of Seep "13" (Hatch, 2014). Sampled seep pool at base of berm. See Figure 8. 47.62307 N; 92.68063 W	Grab sample, collected directly into sample bottles. USSM0264.jpg USSM0265.jpg
S08	S08-Water	9/12/2017 2:03 pm	Township 59N, Range 18W, Section 23; Sampled wetland at foot of berm. Mr. Moe referred to wetland as "background area" and mentioned background monitoring well located in this wetland. See Figure 11. 47.58625 N; 92.60082 W	Grab sample, collected directly into sample bottles. USSM0266.jpg USSM0267.jpg
S09	S09-Water	9/12/2017 3:00 pm	Township 59N, Range 18W, Section 10; Sampled wetland immediately outside of sheet pile at SC&R Catch Basin-12. See Figure 9. Noticed sheet pile cut very low. 47.61222 N; 92.61440 W	Grab sample. Glass grab jar used to collect samples. USSM0268.jpg USSM0269.jpg USSM0270.jpg USSM0271.jpg
S10	S10-Water	9/12/2017 3:15 pm	Township 59N, Range 18W, Section 10; Sampled seepage collected in SC&R Catch Basin-12. See Figure 9. 47.61234 N; 92.61449 W	Grab sample. Glass grab jar used to collect samples. USSM0272.jpg USSM0273.jpg

Sample Station No.	Sample Numbers - Type	Collection Date/Time	Sample Description and Location	Sampling Method and Photos
S11	S11-Water	9/13/2017 9:44 am	Township 59N, Range 18W, Section 15; Sampled wetland immediately outside of sheet pile at SC&R Catch Basin-5. See Figure 10. 47.59992 N; 92.60999 W	Grab sample, collected directly into sample bottles. USSM0275.jpg USSM0278.jpg USSM0279.jpg
S12	S12-Water	9/13/2017 9:49 am	Township 59N, Range 18W, Section 15; Sampled seepage collected in SC&R Catch Basin-5, near inlet. See Figure 10. 47.59991 N; 92.60999 W	Grab sample. Glass grab jar used to collect samples. USSM0276.jpg USSM0277.jpg USSM0280.jpg USSM0281.jpg
S13	S13-Water	9/13/2017 9:55 am	Township 59N, Range 18W, Section 15; Sampled wetland immediately outside of north end of sheet pile at SC&R Catch Basin-5. See Figure 10. 47.59993 N; 92.61001 W	Grab sample. Glass grab jar used to collect samples. USSM0282.jpg USSM0283.jpg
S14	S14-Water	9/13/2017 10:23 am	Township 59N, Range 18W, Section 30; Dark River Pond. Sampled at base of coarse tailing berm at edge of pond. See Figures 3 and 4. 47.55915 N; 92.67916 W	Grab sample, collected directly into sample bottles. USSM0284.jpg USSM0285.jpg USSM0286.jpg
S15	S15-Water	9/13/2017 11:10 am	Township 59N, Range 18W, Section 24; Sampled flowing water in Timber Creek, at mid-stream. Stream width at sampling point was 6 feet. Stream depth at sampling point was 4-6 inches. See Figure 5. 47.56624 N; 92.67951 W	Grab sample. Glass grab jar used to collect samples. USSM0288.jpg USSM0289.jpg USSM0290.jpg
R16	R16-Water	9/13/2017 12:52 pm	Field blank.	Grab sample, collected directly into sample bottles. USSM0291.jpg

Sample Station No.	Sample Numbers - Type	Collection Date/Time	Sample Description and Location	Sampling Method and Photos
CB11	CB11out - Water field parameters	9/12/2017 3:36 pm	Township 59N, Range 18W, Section 10; Field measurements at wetland location immediately outside of sheet pile at SC&R Catch Basin-11. See Figure 9. Noted water staining at level of sheet pile handling holes. 47.61070 N; 92.61397 W	Field measurement, YSI 556 MPS. Glass grab jar used to collect sample. USSM0274.jpg
	CB11in - Water field parameters	9/12/2017 3:43 pm	Township 59N, Range 18W, Section 10; Field measurements of seepage collected in SC&R Catch Basin-11, immediately inside of sheet pile. See Figure 9. 47.61070 N; 92.61397 W	Field measurement, YSI 556 MPS. Glass grab jar used to collect sample. USSM0274.jpg
CB12	CB12in - Water field parameters	9/12/2017 2:50 pm	Township 59N, Range 18W, Section 10; Field measurements of seepage collected in SC&R Catch Basin-12, 20 feet southeast of inlet. See Figure 9.	Field measurement, YSI 556 MPS. Glass grab jar used to collect sample.
DRP Swale	DRPSwale- Water field parameters	9/13/2017 10:35 am	Township 59N, Range 18W, Section 30; Dark River Pond Swale, just downgradient of Dark River Pond. Sampled at south end of swale. See Figure 4. 47.559722 N; 92.680833 W	Field measurement, YSI 556 MPS. Glass grab jar used to collect sample. USSM0287.jpg

We completed sampling activities and returned to the Administration Building parking lot at 11:38 am on September 13, 2017. Mr. Moody collected a field blank sample, identified as sample "R16", at 12:52 pm. We secured the samples in iced coolers in our locked vehicle.

III. D. Closing Conference

The group returned to the Administration Building conference room and I initiated the closing conference at 1:05 pm. Ms. Bartovich provided a flash drive with copies of requested documents. I copied the files to my laptop, and again confirmed that the files did not contain CBI. I asked the USS representatives which NPDES permit is currently being implemented. Mr. Moe said "the 2010 Permit modification." Ms. Bartovich agreed. I asked if USS has a storm water pollution prevention plan (SWPPP). Mr. Moe said they do and are following requirements of MPCA's general storm water permit. I asked if any of USS' previous permits for the Tailings Basin included storm water requirements. Mr. Moe confirmed that previous permits did not contain storm water requirements. Mr. Moe added "with the exception of rain on outer perimeter dike, all runoff goes into the basin." I asked for a copy of the SWPPP covering the Tailings Basin. Ms. Bartovich provided the SWPPP documents on a flash drive and I copied the files to my laptop.

I provided Mr. Moe with a list of documents received and a sample receipt (Appendix D), and asked him to make copies. Ms. Bartovich signed the document receipt. I asked the USS representatives if they had any questions. Ms. Bartovich requested a copy of EPA's last inspection. I said that I was not involved

with the last inspection and would pass along the request to EPA management. I concluded the closing conference and Mr. Moody and I departed the facility at 2:35 pm.

III. E. Sample Handling Information

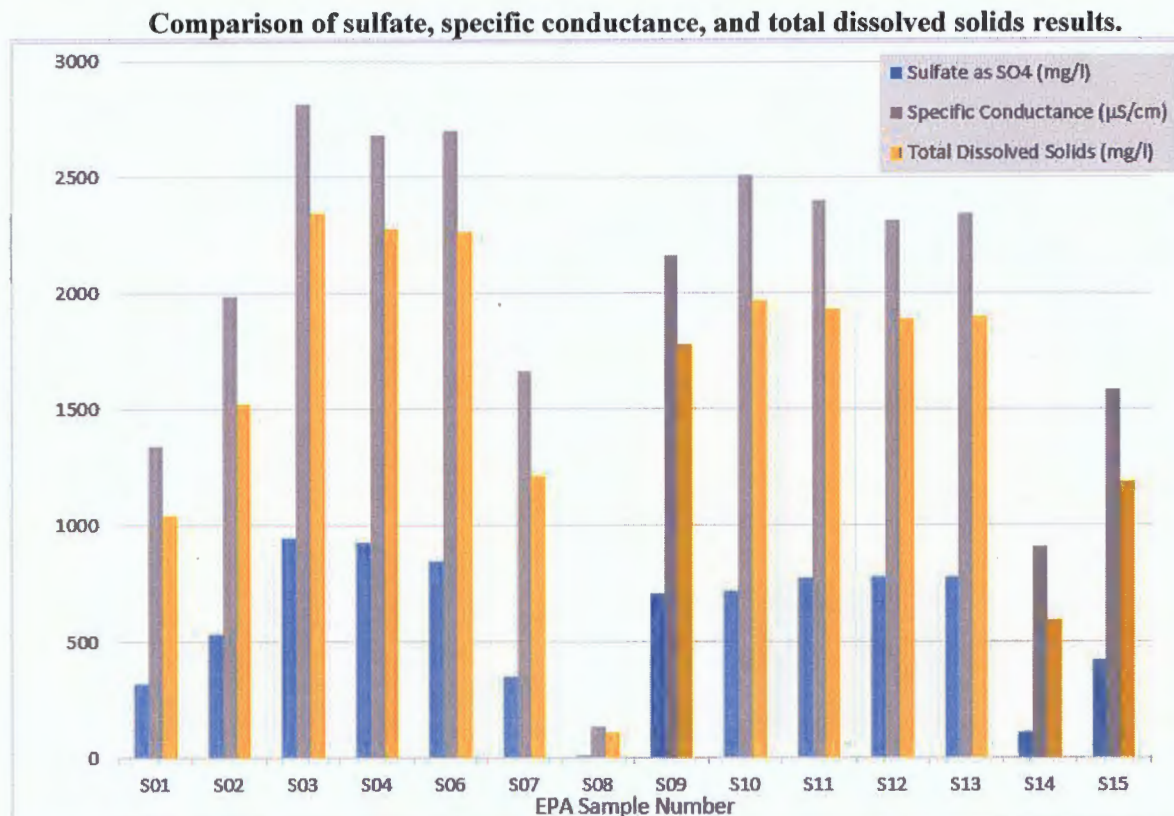

All samples were tagged, placed in a cooler and packed with ice. Custody was maintained during the inspection by locking the samples in an EPA vehicle. Mr. Moody retained the vehicle keys. After being sealed in a bag in the coolers, Mr. Moody and I delivered the samples to the Chicago Regional Lab on September 14, 2017. Copies of the sample chain-of-custody forms are included in Appendix E.

IV. DOCUMENTS RECEIVED

The list of documents received during the inspection is included in Appendix D "Inspection Documents Received by EPA."

V. COMPLIANCE SAMPLING INSPECTION RESULTS

The results of EPA's compliance sampling inspection are summarized in Tables 2-4, below, and in Figure 12, which includes results for a subset of parameters. The laboratory reports are provided in Appendix F. The graph below compares results of sulfate, specific conductance, and total dissolved solids.

Site Name & Location: U.S. Steel – Minntac Tailings Basin Area Facility
County Road 102
Mountain Iron, MN 55768

Sampling Dates: September 12-14, 2017

Introduction

U.S. Environmental Protection Agency Region 5 plans to conduct an announced compliance sampling inspection (CSI) at the U.S. Steel – Minntac Tailings Basin Area Facility located near Mountain Iron, Minnesota (see Figure 1). EPA will collect samples to determine the presence of specific pollutants and to document compliance with the Clean Water Act (CWA) and applicable regulations.

Site Description

The Minntac Tailings Basin is a part of a U.S. Steel (USS) mining operation in St. Louis County, Minnesota. The facility was constructed in the 1960's and was issued an NPDES/State Disposal System permit authorizing discharges from the Tailings Basin to the Sand and Dark rivers in 1987. The permit expired in 1992. The Tailings Basin sits on a divide between two major watersheds. When the basin was constructed the headwaters of both watersheds were filled in with mine tailings. The principal activity at this facility is taconite processing. At the maximum operating rate, the facility will generate 15 million long tons of taconite pellets per year.

Project/Sampling Objectives

The objectives of the EPA sampling event are to 1) characterize wastewater discharges from the Tailings Basin through seeps along the basin berms and into surface waters in the Sand River, Dark River, and Timber Creek watersheds; and 2) to determine compliance with USS's NPDES permit. Sample results will be used to document and characterize the wastewater pollutant discharges to the watersheds. USS identified ten surface seepage locations in the report *Minntac Western Seepage Collection System Phase 2 Report* (Hatch, March 11, 2014; see Table 4 below). EPA will evaluate these seeps as potential sampling locations along with other areas along the basin perimeter. EPA will offer to split samples with facility personnel.

During the inspection, EPA will collect grab samples from USS's wastewater seep outfall #SD001, and other berm seeps along the western and northern sides of the Tailings Basin, as discussed above (see Figure 1 for location of outfall #SD001, and Figure 2 for location of known western Basin seeps). EPA may collect stormwater grab samples from permitted stormwater outfalls and/or any observed discharges to surface water through conveyances other than the permitted outfalls (e.g., pipes, ditches, culverts).

Table 1 contains the sampling location, the anticipated analytical parameters of concern, and the types of samples EPA personnel will collect.

Grab samples will correspond with the sampling techniques outlined in 40 C.F.R. §136. Samples will be collected from seepage pools or directly from flowing seeps when visible and above seepage pool water level. However, depending on the information gathered during the on-site evaluation, EPA personnel may modify the sampling approach to assure the collection of representative samples. For example, if a visible seep is flowing along the surface of the berm wall, EPA may dig out some soil below the seep discharge to allow for collection of free flowing seep water into the sample jar. EPA will collect field parameters including pH, temperature, specific conductance (conductivity), and dissolved oxygen at each sample location. EPA personnel will ship samples to the Region 5 Central Regional Laboratory (CRL) in Chicago, IL with a chain of custody (COC).

Sample Equipment and Procedures:

EPA will collect grab samples directly from outfalls, seeps, or seep collection areas. EPA will use best judgement in collecting any stormwater discharges to surface water through conveyances other than outfalls (e.g., pipes, ditches, culverts). EPA will collect samples for field analysis in a 1-L glass jar and analyze within 15 minutes of collection.

EPA will collect one field blank using DI water obtained from the Central Regional Laboratory or from EPA's Cleveland Office, to be analyzed for the parameters listed in Table 2. EPA will pour DI water into an unused and clean grab sample collection bottle, (where used for that individual analyses), agitate it, and then pour into the field blank sample bottles. Blank bottles will be prepared and preserved for each analysis listed in Table 3. EPA will also collect one field duplicate sample from SD 001 or one of the seep discharge locations.

CRL will prepare sample bottles and coolers and ship to the OECA Cleveland Office, care of Jonathan Moody, for arrival by September 6.

Following sampling and preservation, EPA will immediately pack sample bottles in coolers and chill them to less than 6°C. EPA will make best efforts to collect samples on September 12-13, for delivery to CRL by September 14.

Table 3 contains a listing of the parameters to be analyzed, analytical methods, preservatives and containers to be used during this project. The actual number and types of samples collected will be determined by the EPA inspectors on-site during the inspection. EPA Inspectors will contact the laboratory immediately following the inspection and notify the lab of the actual number and types of samples being brought in for analysis.

Climatic Limits on Sampling

Adverse weather (high winds/ rain/snow) may delay sampling for health and safety concerns.

Decontamination Procedures

New or pre-cleaned dedicated sampling equipment will be used at the sampling site. No onsite decontamination procedures are anticipated for this sampling activity.

Sample Packaging and Transport

EPA will wrap samples in bubble wrap and/or Ziploc bags if needed, and pack them in a cooler with ice for transport. EPA will place a Chain of Custody form inside a Ziploc bag, taped to the top inside lid of the sample cooler. EPA will tape each sample cooler shut and place custody seals on all 4 corners of the cooler. Alternatively, EPA may place the samples in a plastic garbage bag inside the cooler, seal the garbage bag with tape, and place a custody seal around the tape. EPA inspectors will deliver the samples to CRL.

Safety Procedures

Safety procedures in the Region 5 Health and Safety Manual - R 1440 (May 2000 edition) will be followed during the inspection. Once on-site, USS's safety and health policies will also be discussed and followed where applicable. If there is a conflict between EPA's safety plan and the facility's safety plan, EPA inspectors will coordinate with EPA's Safety Office and decide which procedure provides greater protection for the inspection team members.

Sampling Plan Modification

This sampling plan is subject to modification depending upon conditions encountered in the field and other circumstances.

Assessments

EPA inspectors will conduct an internal assessment of the sampling plan upon completion of initial on-site surveillance. If sampling and/or laboratory issues are identified, EPA inspectors will coordinate with CRL and/or Region 5 chemists to develop timely corrective actions. Any changes to the sampling plan will be recorded in the inspectors' field notebooks, and included in the inspection report submitted to EPA management.

APPROVED BY:  *Dean Maraldo for R/B*
Ryan Bahr, Section 2 Chief
WECAB, U.S. EPA, Region 5
Date 9/8/17

Site Name & Location: U.S. Steel – Minntac Tailings Basin Area Facility
County Road 102
Mountain Iron, MN 55768

Sampling Dates: September 12-14, 2017

Introduction

U.S. Environmental Protection Agency Region 5 plans to conduct an announced compliance sampling inspection (CSI) at the U.S. Steel – Minntac Tailings Basin Area Facility located near Mountain Iron, Minnesota (see Figure 1). EPA will collect samples to determine the presence of specific pollutants and to document compliance with the Clean Water Act (CWA) and applicable regulations.

Project/Sampling Objectives

The objectives of the EPA sampling event include the characterization of wastewater discharges from the Tailings Basin through seeps along the basin berms and into surface waters in the Sand River, Dark River, and Timber Creek watersheds. EPA may collect surface water grab samples from wadeable receiving water streams. EPA will offer to split samples with facility personnel.

Grab samples will correspond with the sampling techniques outlined in 40 C.F.R. §136. Samples will be collected in accordance with the procedure outlined below.

Wadeable Stream Sampling Procedure:

1. Put on nitrile gloves. Make sure not to handle sunscreen or other chemical contaminants until after the sample is collected.
2. Collect the water samples from the stream sample site in a flowing portion near the middle of the stream. Be sure to collect the water samples prior to any disturbance of the stream upstream of the site.
3. Rinse the pre-cleaned 1-L glass sample jar three times with water, and discard the rinse downstream.
4. Fill the 1-L glass sample jar with water and slowly pour into the 500ml HDPE sample bottle (for metals and hardness analysis) until full. Cap the bottle tightly. Fill the 1-L glass sample jar with water and slowly pour into the 1-L HDPE sample bottle (for alkalinity, TSS/TDS, and anions) until full. Cap the bottle tightly.
5. Collect a stream sample for field analysis (temperature, pH, specific conductance, and DO) in a 1-L glass jar and analyze within 15 minutes of collection.
6. Record any pertinent stream information (stream name, ID, date, etc.). Note anything that could influence sample chemistry (heavy rain, potential contaminants).
7. Following sampling and preservation, EPA will immediately pack sample bottles in coolers and chill them to less than 6°C. EPA will make best efforts to collect samples on September 12-13, for delivery to CRL by September 14.

EPA will collect one field blank using DI water obtained from the Central Regional Laboratory or from EPA's Cleveland Office, to be analyzed for the parameters listed in Table 2 of the QAPP/SAMP. EPA will pour DI water into an unused and clean grab sample collection bottle, (where used for that individual analyses), agitate it, and then pour into the field blank sample bottles. Blank bottles will be prepared and preserved for each analysis listed in Table 3 of the QAPP/SAMP.

Table 3 of the QAPP/SAMP contains a listing of the parameters to be analyzed, analytical methods, preservatives and containers to be used during this project. The actual number and types of samples collected will be determined by the EPA inspectors on-site during the

inspection. EPA Inspectors will contact the laboratory immediately following the inspection and notify the lab of the actual number and types of samples being brought in for analysis.

Decontamination Procedures

New or pre-cleaned dedicated sampling equipment will be used at the sampling site. No onsite decontamination procedures are anticipated for this sampling activity.

Sample Packaging and Transport

See QAPP/SAMP.

Safety Procedures

See QAPP/SAMP.

Sampling Plan Modification

This sampling plan is subject to modification depending upon conditions encountered in the field and other circumstances.

Assessments

See QAPP/SAMP.

MINNESOTA ORE OPERATIONS – USS HAZARD TRAINING PROGRAM

This training is for those who spend less than five consecutive days on the property.

In accordance with 30 CFR part 48.31, the following instructions apply to your visit of Minnesota Ore Operations. For your personal safety **STRICT ADHERENCE** of these regulations must be observed at all times.

Personal Protective Equipment: Approved hard hats, safety glasses and metatarsal guard footwear must be worn in all areas of the property except the administration offices, training rooms and other designated office areas. Hearing and respiratory protective devices must be worn in designated areas. After your first visit to Minnesota Ore Operations you must provide your own hard hat, safety glasses, and footwear. Entry may be denied for subsequent visits if you do not have these items with you.

Hazard Recognition and Avoidance

- Firearms, alcoholic beverages, drugs, narcotics are not to be transported or used on company property.
- Company policy is to arrest and prosecute anyone who commits theft of Minnesota Ore Operations property.
- Observe all "NO SMOKING" areas.
- There is no smoking in any building on the property.
- Use caution when putting out cigarettes, etc.
- Do not step in front of or get close to working or moving machinery as the operator may not see you.
- Use extreme caution when entering and exiting buildings with equipment, etc.
- Never take short cuts, use only designated walkways, watch your step, walk, don't run.
- Never walk under suspended loads.
- Be alert for slippery floors and tripping hazards.
- Shield your eyes in the immediate area of cutting and welding operations.
- Keep clear of jib crane and overhead crane swing areas.
- Know the fire exits and fire alarm warning.
- Loads delivered or picked up must be secured. While working on a truck bed, consider tie-off when above four feet off the ground or when secure footing cannot be maintained.
- Don't cross under, over, or between railroad cars.
- All vehicles are subject to periodic, unannounced inspection at any time and at any location on the property.
- Obey all traffic control signs. Stop, Look, and Listen at railroad crossings.
- The maximum speed limits are posted and will be strictly enforced.
- Park only in designated areas and do not park on or within six feet of railroad tracks.
- All mine operating equipment has the right-of-way over passenger vehicles.
- Authorization is required to drive on roads in the Mining Division areas or visit areas other than those related to your assignment.
- If authorized to be in maintenance shop areas, agglomerator, concentrator, crushers, mine, dumping, or loading-out facilities, you must have an MSHA 5000-23 Form or be accompanied by a Minnesota Ore Operations employee.

ISO 14001 Environmental Policy – 3C's

Continuous Improvement to the Environment (CITE)

Commitment to Prevention of Pollution

Compliance with Laws and Regulations

Emergency procedures

- In case of emergency, follow the directions of the area supervisor or your U.S.S. contact.
 - Any accident or injury occurring during your visit must be reported to the area supervisor immediately.
 - If you have any questions concerning the emergency procedures or safety regulations, contact the Safety Department or the Security Gate.
- Emergency Phone Numbers Minntac: 1911 or 218-749-7442 Keetac: Fire: 500 Medical: 400 or 218-778-8798

On behalf of myself; my parent and subsidiary corporations, in consideration for the granting of permission to enter upon the property owned by Minnesota Ore Operations – U.S.S., I hereby release and agree to hold harmless and indemnify Minnesota Ore Operations, affiliates, officers, employees, and agents from and against all claims and liability for any and all injuries, losses and damages to any person or property arising out of entry onto Minnesota Ore Operations' property from the date of this release.

I certify that I have read, understand, and will comply with the above safety regulations.

From: Amanda Wroble, Chemist
US EPA Region 5 Chicago Regional Laboratory

The data transmitted under this cover memo successfully passed CRL's data review procedures as documented in the current Quality Management Plan and applicable Standard Operating Procedures. In accordance with the EPA QA/G-8 *Guidance on Environmental Data Verification and Data Validation* and the U.S. EPA Region 5 RMD QMP, CRL performs data verification on all the data generated internally. CRL does not perform data validation or quality assessment procedures.

This report was reviewed and the information provided herein accurately represents the analysis performed.

ANALYSIS CASE NARRATIVE

GENERAL INFORMATION

CRL received water samples for trace metals analysis by inductively coupled plasma-mass spectrometry (ICP-MS) on September 14, 2017. The assigned work order(s) and sample numbers to which this narrative applies are listed below:

Work Order (number of samples)	Batch Number
1709003 (16)	B17I021

The designated analyst for these samples, Amanda Wroble, can be reached at 312.353.0375. All holding times were met.

The samples were digested using CRL SOP METALS025, Rev. 3 (EPA Method 200.2) and analyzed using CRL SOP METALS001, Rev. 7 (EPA Method 200.8/SW-846 Method 6020B).

SAMPLE ANALYSIS AND RESULTS

The data reported herein meet the requirements referenced in the SOP used for analysis and any laboratory specifications stated in the *Quality Assurance Project Plan/Sampling Plan for Environmental Compliance Assessment for U.S. Steel - Minntac Tailings Basin Area Facility* dated August 2017 with a few minor exceptions. Barium was reported from ICP-MS instead of ICP-AES; and chromium, manganese, and molybdenum were reported down to 1.0 µg/L, which was lower than reporting limits specified in the QAPP.

Manganese results for multiple samples exceeded the highest calibration point (500 µg/L). Linearity was demonstrated up to 5 mg/L within the run. Manganese results for these samples that were less than the linearity check were reported from the undiluted samples. The manganese result that exceeded the linearity check (1709003-09) was reported from a fivefold dilution.

All analytes were reported from Run 1 with the exception of arsenic, which was reported from Run 2 due to failure of low level quality control audits (laboratory control blank and reporting limit check) for arsenic.

Several analytes were present in the field blank above their respective method detection limits (MDL). No flags were applied to the data, as CRL has no audit limits for field quality control samples.

Subject: Review of Region 5 Data for U.S. Steel - Minntac Tailings Basin Area Facility

To: Water Division, WECA Region 5
77 West Jackson Boulevard
Chicago, IL 60604

From: Francis Awanya, Chemist
US EPA Region 5 Chicago Regional Laboratory

The data transmitted under this cover memo successfully passed CRL's data review procedures as documented in the current Quality Management Plan and applicable Standard Operating Procedures. In accordance with the EPA QA/G-8 *Guidance on Environmental Data Verification and Data Validation* and the U.S. EPA Region 5 RMD QMP, CRL performs data verification on all the data generated internally. CRL does not perform data validation or quality assessment procedures.

This report was reviewed and the information provided herein accurately represents the analysis performed.

X Francis A. Awanya

10/13/2017

Please contact the analyst with any technical report issues, Robert Thompson at (312)-353-9078 for sample project concerns, and Sylvia Griffin at (312)-353-9073 with data transmittal questions. Thank you.

Analysis Case Narrative

General Information

Sixteen (16) water samples collected for the project were received at the Chicago Regional Laboratory (CRL) on 09/14/2017. Total Suspended Solids (Solids, TSS) analysis was assigned to those samples. The samples were analyzed for TSS using Standard Operating Procedure (SOP) CRL Document # AIG018 Version # 3 (Based on SM 2540 D (APHA, AWWA, WEF)). The designated analyst is Francis Awanya. Francis can be reached at 312-886-3682. Other pertinent information is provided in the final analysis report.

The sample preparation and analysis began on 09/20/2017 and were completed on 09/22/2017. Samples 1709003-01 (Sample Name: S01), 1709003-02 (Sample Name: S02), 1709003-03 (Sample Name: S03), 1709003-04 (Sample Name: S04), 1709003-05 (Sample Name: D05), 1709003-06 (Sample Name: S06), 1709003-07 (Sample Name: S07), 1709003-08 (Sample Name: S08), 1709003-09 (Sample Name: S09), 1709003-10 (Sample Name: S10) were not analyzed within the holding time. The sample results are flagged "J" for estimated: The identification of the analyte is acceptable; the reported value is an estimate. The remaining samples were analyzed within the holding time.

Sample Analysis and Results

The data reported herein met the requirements of Quality Assurance Project Plan (QAPP)/Sampling Plan for Environmental Compliance Assessment for U.S. Steel – Minntac Tailings Basin Area Facility dated August 2017 and the CRL SOP used for analysis. The QAPP is archived as "MN0057207_Minntac_QAPPSAMP_20170831" in the CRL share drive.

Quality Control

All required quality control criteria for the laboratory, method, and system performance audits were evaluated and determined to be within the CRL's QC limits except analysis holding time for the samples listed above.

Analysis Case Narrative

General Information

Water samples for the analysis of total mercury by cold vapor atomic absorption (Hg Total CVAA) were received at the Chicago Regional Laboratory (CRL). Dates of receipt are included in the body of this report. The samples met the pH preservation requirement upon receipt. The samples were analyzed within the 28 day hold time. The designated analyst, Colin Breslin, can be reached at 312-886-2912.

The samples were prepared and analyzed according to CRL SOP AIG044E Version #4 (based on EPA 245.1/SW-846: 7470A).

Note: supporting data are archived with work order 1709001.

Sample Analysis and Results

The data reported herein meets the requirements referenced in the SOP used for analysis and any laboratory specifications stated in the U.S. Steel – Minntac Basin Area Facility County Road 102 Mountain Iron, MN 55768 Quality Assurance Project Plan (QAPP), August 2017. The QAPP is saved on the CRL share drive with file name: MN0057207_Minntac_QAPPSAMP_20170831.pdf.

Quality Control

All Quality Control (QC) audits were within CRL limits for the requested analytes or did not result in qualification of the data.

ANALYSIS CASE NOTES

General Information

Work Order	Number of Samples	Date Received
1709003	16	09 14 17

All holding times were met. Analyst K Swan 312 353 9071.

Sample preparation was performed using CRL SOP Metals 025, Version No. 3, based on EPA sample preparation procedure 200.2 and analysis was performed using CRL SOP Metals003, Version 6, based on EPA ICP Method 200.7/SW-846 6010D. Supporting documents filed with 1708008.

Sample Analysis and Results

The data reported herein meet the requirements referenced in the SOP used for analysis and any laboratory specifications stated in the *Quality Assurance Project Plan/Sampling Plan for Environmental Compliance Assessment for U.S. Steel – Minntac Tailings Basin Area Facility* dated August 2017, with the exception that laboratory reporting limit for hardness is 1.32 mg CaCO₃/L, which is greater than the 1.00 mg CaCO₃/L mentioned in above requirements.

Iron is reported from 273 line and aluminum is reported from 308 line due to QC recoveries.

Quality Control

All quality control (QC) audits were within CRL limits or did not result in qualification of the data, with the following exceptions:

Calcium (and therefore hardness) is flagged J due to various QC recovery issues
Phosphorous is flagged L for 1709003-09 due to possible spectral interference

Subject: Review of Region 5 Data for U.S. Steel - Minntac Tailings Basin Area Facility

To: Water Division, WECA Region 5
77 West Jackson Boulevard
Chicago, IL 60604

From: Anna Knoebel, Chemist
US EPA Region 5 Chicago Regional Laboratory

The data transmitted under this cover memo successfully passed CRL's data review procedures as documented in the current Quality Management Plan and applicable Standard Operating Procedures. In accordance with the EPA QA/G-8 *Guidance on Environmental Data Verification and Data Validation* and the U.S. EPA Region 5 RMD QMP, CRL performs data verification on all the data generated internally. CRL does not perform data validation or quality assessment procedures.

This report was reviewed and the information provided herein accurately represents the analysis performed.

X

Please contact the analyst with any technical report issues, Robert Thompson at (312)-353-9078 for sample project concerns, and Sylvia Griffin at (312)-353-9073 with data transmittal questions. Thank you.

ANALYSIS CASE NARRATIVE – Anions by IC

Work order #: 1709003
Analyst: Anna Knoebel
Phone #: (312) 353-9467

General Information

Sixteen samples for Anions by IC (fluoride, chloride, sulfate, and bromide) were received on September 14, 2017. All holding times were met.

Sample Analysis and Results

The samples were analyzed September 26 – 28, 2017 for Anions by IC in water using CRL SOP AIG045A, Version #6 (SOP based on EPA 300.0). The data reported herein meets any laboratory specifications referenced in the sampling QAPP titled “MN0057207_Minntac_QAPPSAMP_20170831” and the requirements referenced in CRL SOP AIG045A, Version #6 (SOP based on EPA 300.0) except for those listed in the QC section below.

Quality Control

Matrix Spike (MS)

The chloride and sulfate matrix spike recoveries for samples 1709003-04 (S04) and 1709003-11 (S11) were negative and below the acceptance criteria (80 – 120 %). These samples were diluted, as a result, the spikes were diluted out causing the spike result to be invalid. The sample results were not qualified on this basis.

The fluoride matrix spike recoveries for sample 1709003-04 (S04) and 1709003-11 (S11) were also below the acceptance criteria (80 – 120 %). There may be some matrix interferences and the reported values may be biased low. The fluoride sample results were qualified “L” (The identification of the analyte is acceptable; the reported value may be biased low. The actual value is expected to be greater than the reported value).

Duplicate (DUP)

The bromide %RPD for sample 1709003-11 (S11) and its duplicate was above the acceptance criteria ($\leq 20\%$). The sample result was qualified “J” (The identification of the analyte is acceptable; the reported value is an estimate).

Continuing Calibration Blank (CCB)

Six out of the ten CCB results for sulfate were above the MDL (0.02 mg/L). Sulfate was below the MDL in the other blanks. This blank contamination is most likely due to carryover from the high levels of sulfate in the samples. Sample 1709003-16 (R16) was qualified “J” (The identification of the analyte is acceptable; the reported value is an estimate). The remaining sample results were not affected by the blank contamination.

because they were more than ten times the CCB result, no qualifiers were necessary.

All other quality control audits were within CRL limits or did not result in qualification of the data.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION 5 CHICAGO REGIONAL LABORATORY
536 SOUTH CLARK STREET
CHICAGO, ILLINOIS 60605

Date: 1/30/2018
Subject: Review of Region 5 Data for U.S. Steel - Minntac Tailings Basin Area Facility
To: Water Division, WECA Region 5
77 West Jackson Boulevard
Chicago, IL 60604
From: Francis Awanya, Chemist
US EPA Region 5 Chicago Regional Laboratory

The data transmitted under this cover memo successfully passed CRL's data review procedures as documented in the current Quality Management Plan and applicable Standard Operating Procedures. In accordance with the EPA QA/G-8 *Guidance on Environmental Data Verification and Data Validation* and the U.S. EPA Region 5 RMD QMP, CRL performs data verification on all the data generated internally. CRL does not perform data validation or quality assessment procedures.

This report was reviewed and the information provided herein accurately represents the analysis performed.

X Francis A. Awanya 1/31/2018

Please contact the analyst with any technical report issues, Robert Thompson at (312)-353-9078 for sample project concerns, and Sylvia Griffin at (312)-353-9073 with data transmittal questions. Thank you.

Attached are Results for: U.S. Steel - Minntac Tailings Basin Area Facility

Analysis Case Narrative

General Information

Sixteen (16) water samples collected for the project were received at the Chicago Regional Laboratory (CRL) on 09/14/2017. The samples were logged in the CRL LIMS for Total Alkalinity analysis on 09/15/2017 under Work Order Number 1709003. The samples were analyzed for Total Alkalinity using Standard Operating Procedure (SOP) CRL Document # AIG005 Version # 3 (Based on SM 2320B). The designated analyst for the samples is Francis Awanya. Francis can be reached at 312-886-3682. Other pertinent information is provided in the final analysis report. Analysis was completed within the holding time.

Sample Analysis and Results

The data reported herein meets the requirements of the CRL analytical SOP used for Total Alkalinity assay and the U.S. Steel – Minntac Basin Area Facility County Road 102 Mountain Iron, MN 55768 Quality Assurance Project Plan (QAPP), August 2017. The QAPP is archived in the CRL share drive with as "MN0057207_Minntac_QAPPSAMP_20170831.pdf".

Quality Control

All required quality control criteria for the laboratory, method, and system performance audits were evaluated and determined to be within the CRL's QC limits or did not result in qualification of the data.
